

ING RESILIENT DEFENSE CTIVITY

Our Satellite Systems deliver secure, high-capacity global communications for the
use, ensuring mission-critical connectivity anytime, anywhere.

POWERING SECURE BATTLEFIELD COMMUNICATIONS

WESS delivers uninterrupted, high-capacity data links for real-time command and allied coordination in contested environments.

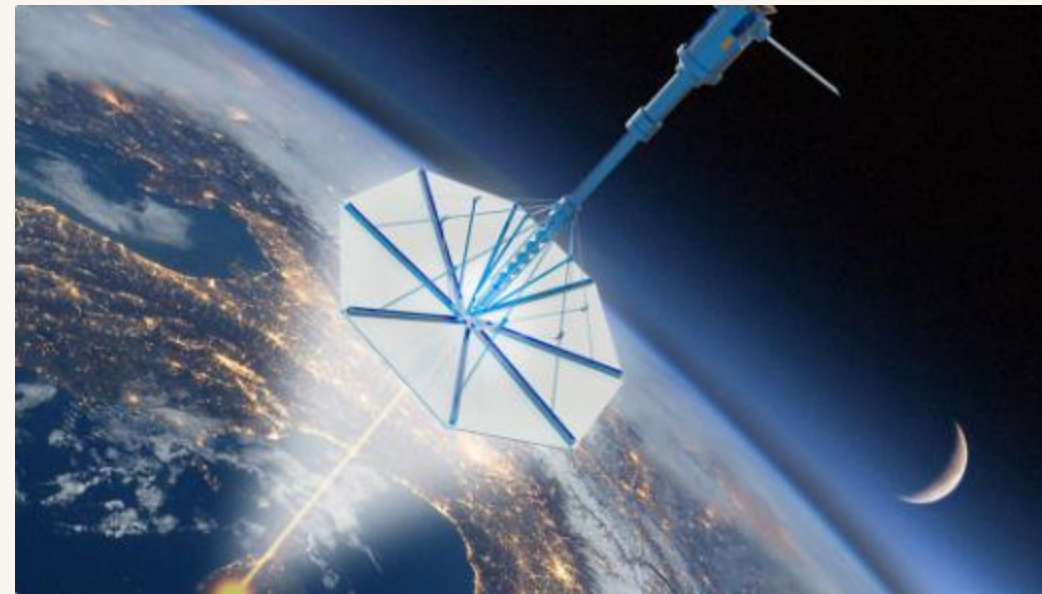

The **WESS program** is the backbone of the DoD's global communications, providing **secure, high-capacity, and uninterrupted data links**. It enables **real-time situational awareness, tactical control, and strategic readiness** across command centers, forward units, and allied partners—ensuring dominance in increasingly contested, data-driven battlefields.

DRIVING TACTICAL NETWORK INNOVATION AND EVOLUTION

Leveraging advanced DIG-IF technology to ensure seamless transition from legacy WCN to future-ready STN backhaul

Innovative **Digital Intermediate Frequency (DIG-IF)** technology enhances throughput and network resilience

Intrepid platform enables smooth evolution from legacy **Wideband Communications Network (WCN)** to next-generation **Satellite Tactical Network (STN)**

Ensures future-ready tactical backhaul capabilities aligned with evolving DoD operational needs

INTREPID'S COMPETITIVE EDGE: PERFORMANCE & GLOBAL REACH

Delivering flawless contract execution and global connectivity for every Combatant Command

Delivered multi-hundred-million-dollar WESS contract on time and within budget

Operates global teleports that strategically support every Combatant Command

Achieved zero mission loss throughout contract duration

Ensures seamless communication and operational readiness worldwide
